## The irresistible rise of Stunopolis

How Stunopolis became the largest city of the solar system.

Thanks to its mayor, Don Stuno de La Vega, in the year 2055, Stunopolis had, for a long time, confirmed its status as the largest city on planet Earth, further ahead of Los Angeles, London and Paris.

Not only Stunopolis was the largest city, it was also the safest thanks to the Stuno Police Department and its army of Stunocops.

And this was just the beginning...

On 7th February 2055, Don Stuno held a citizen council meeting at the Stunopolis townhall and the decision was taken to make Stunopolis a space city.

Stunopolis would become a huge space station, floating over planet Earth.
